

Is there a need to go to the family dentist while braces are on?

Great question. YES! Our office is a specialty practice, focusing on facial and dental growth and development. Regular visits to your dentist's office are critical to excellent dental health. There are important cleaning appointments that do not need to be missed while wearing braces.

Here's an idea...With some planning, we can remove the wires from the braces right before your cleaning appointment. That way, your dental hygienist can do as good a job as possible getting around the teeth for polishing and cleansing. In order to coordinate that, please let us know well in advance of your dental cleaning appointment, and we'll see how we can help.

There is no extra charge for this service. Help us help you by coordinating our appointments with your cleaning appointments throughout your braces experience!
